NxtWave

MERN - 2023
Data Mastered MERN stack, RESTful APIs, Python, and end-to-end project development

EXPERIENCE

Techbumbles Software Solutions Pvt Ltd | Full Stack Developer

Feb 2025 – Present | Erode, TamilNadu

- Building scalable full-stack web and mobile applications with React, Node.js, and PostgreSQL.
- Collaborating closely with cross-functional teams to deliver new features and improve system architecture.
- Implementing best practices in performance optimization, security, and maintainability.

PM Square Soft Services Pvt Ltd | Full Stack Developer

Aug 2023 – Jan 2025 | Coimbatore, TamilNadu

- Developed and maintained high-performance web applications using React, React Native, Node.js, and .NET Core, ensuring robust and scalable server-side logic.
- Designed and optimized databases with MySQL, MongoDB, SQLite, and SQL Server, ensuring data integrity and efficient retrieval.
- Collaborated with cross-functional teams to define, design, and ship new features, enhancing user experience and functionality.
- Conducted code reviews, debugging, and maintained documentation for code, architecture, and user guides, improving code quality and facilitating onboarding.

Projects

Food Delivery & Catering | Full Stack Developer

- **Developed a comprehensive food delivery management application:** Developed a multi-role food delivery platform allowing customers, restaurants, and riders to participate. Implemented bidding functionality where riders can offer delivery prices, and customers can accept or reject offers.
- **Technologies Used:** React for frontend, Node.js and Dot net core for backend, PostgreSQL for database, ensuring real-time data and scalable architecture.

Dr.Carrot – Hospital Management SaaS | Frontend Developer

- **Developed a responsive hospital management SaaS application:** Built a role-based dashboards and real-time features for hospitals, doctors, receptionists, and patients to manage appointments, medical records, billing, prescriptions, queue management, and patient workflows through a centralized platform.
- **Technologies Used:** React.js, JavaScript, HTML, CSS, REST APIs, ensuring responsive design, seamless user interaction, and scalable frontend architecture.

AutoHive– Parking Management SaaS | Full Stack Developer

- **Developed a comprehensive parking management application:** Built a multi-role parking management platform for users, operators, and admins with features like vehicle entry/exit tracking, parking slot allocation, billing, and real-time monitoring.
- **Technologies Used:** React for frontend, Node.js and .NET Core for backend, MySQL for database, ensuring scalable architecture and efficient parking operations.
